

HP ProtectTools

Bluetooth Configuration

HP ProtectTools Security Manager* can be configured to use the Bluetooth capabilities of a mobile phone. Once paired with the computer, Bluetooth provides an additional layer of security when logging on to your computer.

Steps to enable and configure Bluetooth on your mobile phone:

1. Use the chart below to find the Bluetooth configuration settings on your phone.
2. Ensure that your phone is set to 'Discoverable' under the Bluetooth settings.
3. Use HP ProtectTools Security Manager* to pair your Bluetooth capable mobile phone with the computer.

Mobile OS/phone	Bluetooth configuration
Android	Settings > Wireless and Network >Bluetooth
iPhone	Settings > General > Bluetooth
Palm	Application launcher > Communication (Connection) > Bluetooth
Blackberry	Menu (Home) > Options > Bluetooth
Windows Mobile	Start > Settings > Wireless controls > Bluetooth
Symbian	Menu > Connectivity > Bluetooth
